

CLOSEOUT SALE

If your ATV or UTV sees extreme off road action, then you need the magic of VooDoo Axles. VooDoo Axles' revolutionary design provides ultra-high strength, and the ability to operate at angles other axles can't. Typical axles use inboard CV joints that must both operate at angle, and allow for suspension travel. This dual-purpose design limits articulation angle to about 25 degrees, while travel is restricted to 1.25" – 1.5", which is inadequate for ATV's and UTV's with lift kits. VooDoo Axles utilize fixed Rzeppa inner CV joints that allow 45 degrees of articulation, while a slip spline in the axle shaft provides 2" of travel. Making VooDoo Axles ideal for ATV's and UTV's with lift kits up to 3". VooDoo Axles are available for a variety of ATV and UTV models.
